EDUCATION

Vocational Degree in Information & Communication Technologies

Tredu Vocational College

09/2019 - 11/2021

Tampere

WORK EXPERIENCE

Internship

Rekki.fi

04/2021 - 09/2021

Tampere/Nokia

Task

- The main task of my internship period was creation of a WordPress plugin for warehouse management purposes with a possibility to do all the main interactions using only a barcode scanner (in order to increase employees' working speed).
- As a result, I have made a plugin using PHP and MySQL. Currently, it's in the production stage and being used by employees of Rekki.
- I have prototyped and built a redesign for product pages of their online store. (Currently, it's applied only for a testing instance of the website)

PROFILE

In November 2021 I have graduated from Tredu Vocational College with a vocational degree in ICT (studying program was in Finnish) and now I am searching for a junior full-stack position.

In particular, my main specialization is development of web applications using modern JavaScript frameworks (ReactJS, NodeJS).

Besides that, I have good experience in prototyping and development of relational databases.

Furthermore, I try to develop myself in web design and I already have several design cases made in Figma.

Currently, I am strongly concentrated on MERN stack development and I am building a MERN-based web application as my pet project.
